Lecture 6 Practice Questions

Question 1 (q1.py)

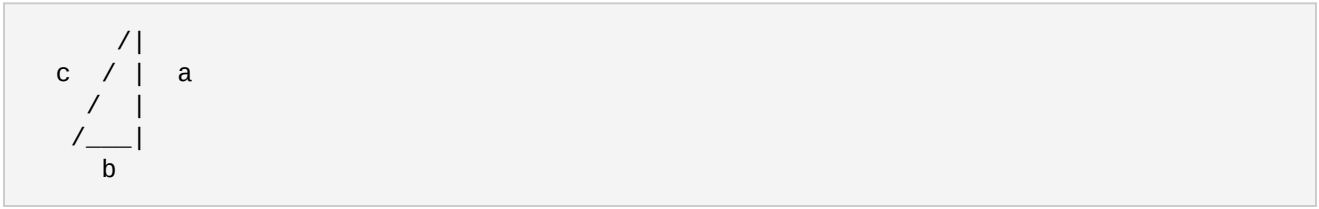
Write a program that reads a phrase from the user prints sandwiched between two lines of dash characters as shown in the sample run:

```
Enter a phrase: Hello, world!

-------------
Hello, world!
-------------
```

Question 2 (q2.py)

Write a program that reads in the lengths of the two legs of a right triangle (a and b in the diagram)and then computes the length of the hypotenuse using the fact that c^2 = a^2 + b^2.



Here's a sample run:

```
What is a? 3.5
What ib b? 6

The hypotenuse c is 6.946221994724902
```

Question 3 (q3.py)

Write a program that asks the user how many sides they would like their die to have, and then rolls the die 3 times and prints the results of each roll.

```
How many die sides? 6
Rolling a 6-sided die three times ...
1st roll: 6
2nd roll: 5
3rd roll: 2
```

Question 4 (q4.py)

Draw a square on the screen using turtle graphics. Make sure the screen does *not* close when the program ends.

Question 5 (q5.py)

Using the tshirt.py module (on the course notes website), draw a t-shirt that says "Please chew quieter". Make it nicely centered.
