Lecture 9 Practice Questions

Question 1 (q1.py)

Write a function called print_in_box(word) that prints word in a box as shown. Use the print_in_bars function from the previous question to print the middle line of the box. Then ask the user to enter a movie name and print in a box.

```
Enter a movie name: The Matrix
+----------+
|The Matrix|
+----------+
```

Question 2 (q2.py)

Write a program that asks the user to enter an int that is 0 or greater, and a word, and then prints the word in a numbered list as shown. Use a for-loop in your solution. No functions are required, but you can make one if you want.

```
Enter an int: 3
Enter a word: hello!
hello!
hello!
hello!
```

Question 3 (q3.py)

Write a program that asks the user to enter an int (called n)that is 0 or greater. Then, starting at 1, print the ints from 1 to n on the screen in a box as shown. Use the print_in_box(word) function from the previous question.

```
Enter an int: 3

+-+
|1|
+-+

+-+
|2|
+-+

+-+
|3|
+-+
```

Question 4 (q4.py)

Write a program that asks the user to enter an int that is greater than 1, and then prints a countdown from that int to 1, finally printing "Blastoff!".

```
Enter an int: 5
5
4
3
2
1
Blastoff!
```
